	/Katherine A. Bareford/ Primary Examiner, Art U	nit 1792	

Continuation of 11. does NOT place the application in condition for allowance because: As to applicant's arguments regarding the 35 USC 103 rejection (1) as to the argument that Booth does not teach three distinct layers, the Examiner notes that Galasso is the primary reference. Booth is cited as to the suggestion to oxidize the Si, SiC containing top layer to form an SiO2 containing layer. (2) As to oxidizing the Si layer by Booth, the Examiner notes that it is not required for the Si layer to contain only Si or for the SiO2 layer to contain only SiO2. Booth clearly provides to oxidize the Si containing layer to provide a protective film. (3) As to Hanzawa, it provides heating to form Si-SiC material as claimed at a temperature and pressure in the claimed range (paragraph [0112]). Hanzawa is not distinct from the present invention such that the teaching cannot be used. Applicant refers to features of spray coating, but Hanzawa shows that treatment in the claimed temperature and pressure range is already known. (4) As to the temperature range claimed, applicant refers to the declaration as showing the critical nature of the claimed range. The Examiner has reviewed the declaration however, unexpected benefits are not shown for the reasons discussed previously, and as follow. First, the suggested temperature and pressure of Hanzawa are within the claimed range. Second, the upper limit is not shown to be unexpected (with effectiveness below the upper limit unexpected), as Hanzawa teaches that effective results occur at 1600 degrees C. As to the lower limit near or above melting allowing faster diffusion, this would be an obvious expected result, as flow and viscosity clearly increase at melting. Expected benefits do not show non-obviousness. (5) the provisional obviousness type double patenting rejection is maintained for the reasons given in the Final Rejection.
